                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-11ke (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-176, IL-177, and IL-171. IL-170 protein can be used to treat abnormal protliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               MYQVVAFLAMVMGTHTYSHWPSCCPSKGQDTSEELLRWSTVPVPPLEPARPNRHPESCRA 60

```

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein in an animal. The IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, hepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidey (glomerulonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherosclerosis, heart failure, anglogenesis); tumours, cancers (lymphoma

Nucleic acid molecules encoding Interleukin 17 (IL-17) - like polypeptides useful in the treatment, prevention and diagnosis of diseases e.g. cancer

Leukaemia); reproductive (infertility, miscarriage, endometriosis), eye (blindness, retinal neuropathy) and treatment of diseases involving inflammation. The present sequence is human Interleukin-17 like (IL-17L)

161 AA;

Sequence

The present sequence represents an interleukin (IL)-174,polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also desoribes homologues IL-17, IL-172, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and cDNA molecules which code for related or homologous proteins. The IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal profiferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying compounds that selectively bind to IL-171. New DNA sequence encoding a mammalian homolog of CTLA-8, designated interleukin-171 (IL-171), useful for recombinant production of IL-171 which can be used for treating conditions associated with abnormal Disclosure; Page 19; 111pp; English

```
mammal by the administration of an agonist or antagonist of the cytokine mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a Th2 response, stimulates an innate immune cresponse towards the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedullary confidence away from a Th2 type response, in serum and faecal material, while administration of an IL-174 antagonist directs the immune conditions (particularly multiple sclerosis, systemic lupus conditions (particularly multiple sclerosis, systemic lupus conditions agent, or inflammatory conditions such as Crohn's conditions may be used to treat inflammatory conditions such as Crohn's conditions may be used to treat inflammatory, allergic or Th2-mediated conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or eosinophilic gastritis). The

interleukin 17 (IL-17) receptor like proteins (see ABA03200-ABA03202, AAM47456, AAM47458 and AAM47459). The IL-17 receptor-like proteins and coding sequences are useful for treating a pathological condition related to immune system dysfunction (e.g. psoriatic arthritis), infections (e.g. viral infections), weight disorders (e.g. obesity), neuronal dysfunction disorders (e.g. Alzheimer's disease), lung disorders (e.g. asthma), skin disorders (e.g. osteoporosis), vascular system disorders (e.g. disorders (e.g. vateoporosis), vascular system disorders (e.g. infections), infinity disorders (e.g. glomerulonephritis), bone disease (e.g. osteoporosis), vascular system disorders (e.g. disorders, reproductive disorders, tumours and inflammation. The present sequence is the protein sequence for IL-17E, a human IL-17 receptor like protein ligand.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö

The sequence is PRO10272 which is the human Interleukin 17E ligand,

IL-17E, encoded by DNA 147531-2821. A composition

Containing ant/agonists to the PRO polypeptides or individual components

are useful for treating a mammal with an immune related disease, e.g.

Systemic lupus erythematosus, rheumatoid arthritis, osteoarthritis,

uvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, an

idiopathic inflammatory myopathy, Sjogram's syndrome, systemic

vasculitis, sarcoidosis, autoimmune hemolytic anaemia, autoimmune

thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal

disease, a demyelinating disease, an autoimmune or immune-mediated skin

clisease, contact dermatitis, an allegic disease e.g. food

hypersensitivity, asthma, a transplantation associated disease, or a

chronic inflammatory demyelinating polyneuropathy. Treating a

chronic inflammatory demyelinating polyneuropathy. Treating a

degenerative cartilaginous disorder comprises administering a PRO1031 or

PRO1122 polypeptide agonist, or anagonist to the mammal. Numerous

examples of the diseases and disorders are given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                juvenile chronic arthritis; spondyloarthropathy; systemic sclerosis; idiopathic inflammatory myopathy; Sjogren's syndrome; skin disease; systemic vasculitis; sarcoidosis; autoimmune haemolytic annemia; asthma; autoimmune thrombocytopaenia; thyroiditis; diabetes mellitus; allergy; immune-mediated renal disease; demyelination; central nervous system;

```
The present sequence is a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be

PRO1081, PRO1274 and PRO10272 stimulate the proliferation of T-lymphocytes and PRO1274 and PRO12022 act to enhance the infiltration of T-lymphocytes. PRO1754 and PRO9122 act to enhance the infiltration of mononuclear cells, eosinophils or polymorphonuclear neutrophils (PMN) bind to them, are used to treat an immune-related disorder in a mammal. The PRO CDNA's and antibodies which bind to them, are used to treat an immune-related disorder in a mammal. Such disorders include systemic lupus erythematosus, rheumatoid arthritis, osteomic siteminic arthritis, a stondyloarthropathy, systemic sclerosis, an idiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune thrombocycopaemia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease of the central or peripheral nervous system, idiopathic demyelinating polyneuropathy, a hepatobiliary disease, infectious or autoimmune chronic active hepatitis, primary bilary circumance control of the central or peripheral central or peripheral nervous system, idiopathic confidence of the central or peripheral nervous system, idiopathic confidence of the central or peripheral nervous system, idiopathic confidence of autoimune chronic active hepatitis, primary bilary confidences of the central or described active hepatitis, primary bilary confidences of the central or described active hepatitis, primary bilary confidences or demyellanders hepatitis, sclerosing cholanders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        inflammatory bowel disease, gluten sensitive enteropathy, Whipple's disease, an autoimmune or immune-mediated skin disease, a bullous skin disease, erythema multiforme, contact dermatitis, psoriasis, an allergic disease, asthma, allergic rhinitis, atopic dermatitis, food hypersensitivity, uricaria, an immunologic disease of the lung, eosinophilic pneumonia, idiopathic pulmonary fibrosis, hypersensitivity pneumonitis, a transplantation associated disease, graft rejection or

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ŏ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ^{\circ}
                                                                                                                                                                                                                                                           ö
employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and gene mapping
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity.

The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequence of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                               The present sequence represents an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-177, and IL-171, IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 RHPESCRASEDGPLNSRAISPWRYELDRDLNRLPQDLYHARCLCPHCVSLQTGSHMDPRG 112

New DNA sequence encoding a mammalian homolog of CTLA-8, designated interleukin-171 (IL-171), useful for recombinant production of IL-171 which can be used for treating conditions associated with abnormal physiology or development
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence represents an interleukin (IL)-174 polypeptide. It is a mammalian homologue of the cytokine designated CTLA-8 (also referred to as IL-17). The specification also describes homologues IL-17, IL-175, IL-173, IL-173, IL-174, IL-176, and IL-177. The DNA sequence encoding IL-171 is useful for identifying genes, mRNA and CDNA molecules which code for related or homologous proteins. The

IL-171 protein, antibodies against IL-171, and compounds which have binding affinity to IL-171 are useful in treatment of conditions associated with abnormal physiology or development, including abnormal proliferation, e.g. cancerous conditions, or degenerative conditions. The IL-171 protein can be used in kits and assay methods for identifying compounds that selectively bind to IL-171.

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17)-like polypeptides. IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction (rheumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. host disease); infections (HIV, chepatitis, bacterial); weight disorders (obesity, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephritis); bone (osteoporosis, heart failure, anglogenesis); tumours, cancers (lymphoma leukaemia); reproductive (infertility, miscartiage, endometriosis), eye (blindness, retinal neuropathy) and treatment of diseases involving inflammation. The present sequence is mouse Interleukin-17 like (IL-17L)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ä

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ô
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 õ
                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to methods of directing an immune response in a mammal by the administration of an agonist or antagonist of the cytokine interleukin 174 (IL-174). Administration of an IL-174 agonist directs the immune response towards a T12 response, stimulates an innate immune response, augments the inflammatory response from epithelial or fibroblast cells, induces gut cell growth, promotes extramedullary haematopotesis, or augments an antibody response in serum and faecal material, while administration of an IL-174 antagonist directs the immune response away from a T12 type response, and prevents inflammation or granuloma formation. IL-174 agonists may be used to treat autoimmune conditions (particularly multiple sclerosis, systemic lupus
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Mouse; interleukin-17 like; IL-17L; immune system dysfunction; diabetes; cytostatic; multiple sclerosis; rheumatoid arthritis; therapy; lupus; inflammatory bowel disease; neuronal dysfunction; transplant rejection; autoimmune disorder; lung; skin; kidney; bone; eye; vascular system;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              erythematosus, rheumatoid arthritis, diabetes or psoriasis), a response to an infectious agent, or inflammatory conditions such as crohn's disease, ulcerative collitis, pancreatitis, or hepatitis. IL-174 antagonists may be used to treat inflammatory, allergic or Th2-mediated conditions (e.g., systemic anaphylactic response, skin hypersensitivity response, dermatitis, asthma, fibrosis, or eosinophilic gastritis). The present sequence represents murine IL-174.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             61 HHAESCRASKDGPLNSRAISPWSYELDRDLNRVPQDLYHARCLCPHCVSLQTGSHMDPLG 120

The invention relates to nucleic acid molecules encoding Interleukin 17 (IL-17)-like polypeptides. IL-17 DNA can be used to modulate the levels of IL-17 protein is useful for treating, preventing or ameliorating a disease, such as immune system dysfunction theumatoid arthritis, osteoarthritis, inflammatory joint disease); autoimmune (multiple sclerosis, lupus, diabetes, inflammatory bowel disease, transplant rejection, graft vs. nost disease); infections (HIV, hepatitis, bacterial); weight disorders (obestry, anorexia, cachexia, sepsis); neuronal dysfunction (Alzheimer's, Parkinson's disease); lung (acute respiratory distress syndrome, cystic fibrosis, emphysema); skin (psoriasis, eczema, wound healing); kidney (glomerulonephritis); bone (osteoporosis, Paget's disease, hypercalcaemia) vascular system (epilepsy atherosclerosis, heart failure, anglogenesis); tumours, cancers (lymphoma
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     leukaemia); reproductive (infertility, miscarriage, endometriosis), dynours, cancers (lymphom (blindness, retinal neuropathy) and treatment of diseases involving inflammation. The present sequence is non-secreted form of mouse Note: The present sequence is non-secreted form of mouse Note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence is non-secreted form of mouse note: The present sequence note: The present note: T

The present sequence represents an interleukin-174 (IL-174) polypeptide. The polypeptide is an IL-17-like (CTLA-8 related) protein. It is a member of a new group of interleukins, IL-170 polypeptides. The members comprise IL-172, IL-173, IL-174, IL-177, and IL-171. IL-170 protein can be used to treat abnormal proliferation e.g. cancer or degenerative conditions. Antibodies can be used in diagnostic methods to detect over production of IL-170 protein in cells or body
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  New isolated polynucleotide encoding a mammalian Interleukin-17 like protein used to identify genes for homologous proteins -
